Zombie Apocalypse
Strikes PreSonus!

Headline

PreSonus Announces Studio One v.2 with Melodyne Integration

Integrated Melodyne Pitch Correction

Celemony's Melodyne is the most sought-after pitch-correction solution in the market, and it has been the model for proprietary solutions in several DAWs. Studio One 2 seamlessly integrates Melodyne so tightly that, for practical purposes, Melodyne is simply a part of Studio One.

PreSonus Studio One
2: Comping

PreSonus Studio One
2: Pitch Correction
with Melodyne
Integration

Transient Detection, Editing and Groove Extraction

Sure, you can do transient detection and editing in other DAWs-but it's slow, and you often have to make a lot of decisions along the way. In Studio One, you can quantize multitrack drums in two steps: group the tracks, then quantize.

Studio One does the analysis and phase-coherent quantization for you-with great-sounding results! Want to quantize audio to other existing audio? Drag-and-drop audio into the Groove panel, then quantize. Groove extraction is as simple as drag-and-drop; extract a groove from any audio and apply it to any other audio in seconds!

Multitrack Comping Done Right

Single and multitrack comping are quick and easy in Studio One-and faster than with most DAWs!

No tool-switching is needed, and crossfading between takes is automated, although you can edit the fades. Auditioning takes is as simple as holding Alt and clicking on a take-no more manually soloing entire lanes, as in other DAWs.

And so much more.....

loaded 10" MF driver and a 1" HF compression driver in a compact enclosure. It is designed to be pole mounted with the matching 18" TMS-Low subwoofer, making a high output (129dB peak) full range portable sound reinforcement system. It is equipped with two flush grab handles, and Speakon NL4 connectors are provided on the rear panel for input and parallel link connections. M10 rigging points are provided for use with an optional yoke or for permanent installations using M10 shoulder eyebolts.

Low frequency loudspeaker

The TMS-Low is a compact horn-loaded subwoofer enclosure consisting of an 18" low frequency driver. It is designed for use with the matching TMS-High mid/high enclosure, making a high output (129dB peak) full range portable sound reinforcement system. The birch plywood cabinet is shaped to allow the TMS-High enclosure to be stowed inside the horn flare when transporting the system in and out of a venue. It is fitted with heavy duty wheels and includes an integral pole mount socket to allow the mid/high to be mounted at the correct height.
