### Allen & Heath Announce The New Waves SoundGrid Card for iLive

Allen & Heath has chosen the PLASA show in London to launch a Waves SoundGrid option module for the iLive digital mixing Series, which provides a low latency 64 channel bi-directional interface to SoundGrid. The new M-Waves module opens up the opportunity to use Waves' acclaimed SoundGrid plug-in processing and concurrent multi-track playback and recording.

Developed by Waves, SoundGrid is an Audio-over-Ethernet networking and processing technology ideal for live applications. It provides an extremely low latency environment for high precision Waves audio processing using standard Gigabit Ethernet networks and an Intel-based server running a customized version of Linux. A separate standard Windows or Mac computer runs the MultiRack SoundGrid control application and GUI functions. An integrated Ethernet switch with two EtherCon and one RJ45 SoundGrid port is provided on the M-Waves module, allowing direct connection of the SoundGrid Server and a PC.

Signals from the mixer can be routed to the M-Waves card for processing and recording, including any bus or Mix Channel (pre or post fade), Input Direct Out, Wedge and IEM monitors, MixRack Inputs, and Input or Mix Insert Sends. Signals from SoundGrid can be routed to Input Channels, Mix External Inputs, Insert Returns, and Output sockets. M-Waves will be incorporated into Allen & Heath's range of audio networking cards, which allow iLive to interface with a variety of common audio networking standards - such as MADI, Dante, EtherSound and Aviom. The cards fit in the expansion slot of iLive MixRacks, comprising the modular iDR0 and iDR10, and fixed format iDR-16, iDR-32, iDR-48, iDR-64 and xDR-16 expander.

### Allen & Heath GSR-24 - 24Channel Studio Recording mixer

GS-R24 combines refined analogue quality with a choice of analogue or Firewire / ADAT interface modules and MIDI control for your chosen Digital Audio Workstation or recording device. Designed to sit at the heart of a busy project studio, GS-R24 has the flexibility and audio excellence to enhance the impact of your recordings, whatever your workflow.

The original concept for the GS-R24 was for a larger version of the ZED-R16 with similar routing philosophy, high quality pre-amps and EQ. Interaction with recording musicians and engineers has resulted in many new features being added a full width meterbridge for example, optional interface cards and more flexibility in workflow setup. The GS-R24 is the culmination of many things: exceptional analogue design, super-flexible usability, control and integration with digital workstations, and with an easily removed interface card it can be future-proofed against fast-moving technology, helping it to gain the status of a true modern classic.

- 24 mic/line input pre-amps
- 24 channels of 4 band EQ with fully parametric mids
- Choice of analogue or Firewire / ADAT interface modules
- 2 dual stereo inputs with EQ
- 2 additional valve inputs
- 6 auxes
- 4 subgroups
- Main Stereo + Mono bus
- PFL, AFL + Solo in Place
- MIDI control
- 5.1 surround monitoring
- Integral meterbridge
- Separate linear power supply
