Network Paging Station for Audia Systems

## Product Brief Description

The Biamp Networked Paging Station-1 is a microphone console designed exclusively for use with AudiaFLEX and AudiaFUSION systems. It carries audio, control and power all through a single CAT5E cable. It features an innovative user interface that allows users to quickly switch between pre-programmed paging groups and zones. This CE-marked and RoHS-compliant microphone integrates with AudiaFLEX and AudiaFUSION networks via CobraNet<sup>®</sup> and can be used within multiple station/multiple device systems. Additional benefits include 16 priorities with override and lockout functions, 32 programmable button operations, 16 simultaneous pages and the choice of Power Over Ethernet (PoE) or external power supply.

## Features

## Benefits

- |  |   |
|--|---|
| • Power Over Ethernet                                      | • No external power supply needed         |
| • Encoder with LCD   | • Easy programming and setup              |
| • Cobranet <sup>™</sup> , Control and Power over one cable | • Streamlined integration                 |
| • Intuitive User Interface                                 | • Easy switching of complex pages & zones |
