StudioLive 24.4.2
Digital Audio Mixer

Product Brief Description

The StudioLive 24.4.2 is a complete live sound digital audio mixing system. Features include XMAX™ microphone preamplifiers, a built-in FireWire recording and playback interface, more than 90 signal processors, a large library of DSP effects, 10 aux buses, 4 subgroups, extensive LED metering, mixer save and recall, channel-strip save/recall/copy/paste and talkback.

Two effects engines include 50 reverbs, delays, and time-based effects. The dual 31-band graphic equalizers can be applied to the main, subgroup, and aux outputs to compensate for room acoustics, speaker response, and other acoustic anomalies. The integrated FireWire interface provides up to 32 channels of recording and up to 26 channels of simultaneous playback. Each FireWire recording channel can be set to record pre- or post-channel signal processing.

The look and feel of the control surface resembles an analog mixing console and is thus very intuitive to operate. It features hardware mute and solo buttons, trim controls, and clearly labeled, individual knobs for the parametric EQ and dynamics processing. Two StudioLive 24.4.2s can be connected via their FireWire ports to get up to 48 inputs.

Features

Benefits

• Live Mixing and recording in one	• Streamlined process
• XMAX™ microphone preamplifiers	• Great sound
• Intuitive “analog-like” interface	• Easy to operate
• 4 Stereo 31 band output EQ’s	• Room tuning, subgroup, aux outputs
• Connect consoles together	• When you need to grow
• Recording Software included	• Just add a computer to record
• iPad/iPod app	• Control console remotely
• Bidirectional remote control with PC or Mac	• Virtual console control

Applications

- House of Worship
- Live Sound
- Theaters
- Project Studios
