EH Series Connectors

Q-G® Rack Panels

WP1, WP2 single & two gang wall plates

Product Brief Description

The EH Series by Switchcraft® is the fastest and most versatile way to create a custom panel or wall plate perfectly suited to meet the needs of any studio, broadcast facility, or systems integrator. EH is a complete line of audio, video, and data connectors built into standard panel-mount XLR housings. The EH series connectors fit into an XLR size hole and attach using 2 4-40 threaded screws which are included with each connector. Custom combinations of EH Series connectors can be quickly loaded into any of our Q-G® Series panels or WP wall plates.

Terminations include: Firewire, DB9, USB, BNC, RCA, 3.5 mm, PS/2 mouse jack, HD15, ST/SC/LT multi and single-mode Fiber Optic, S-Video, RJ45, TOSLINK (F-F), F-Type, Blank Covers and other adapter configurations.

Most connectors are feedthru, which means standard cabling is simply plugged into the back of your gear, then plugged into the back of the EH Series connector. For those EH Series connectors that are not feedthru, solder lugs are clearly marked for simple, secure solder connections. All EH Series connectors are available individually bagged with mounting screws. Q-G® Series panels come standard as 1RU (1x16), 1.5RU (1x16), or 2RU (2x16). Every Q-G® Series panel includes quick change designation strips for easy connector identification.

Features

Benefits

• Optional connectors	• User Customizable
• Screw-in Pre Tapped mounting	• Sturdy
• Multiple Terminations in a Single Panel	• Convenience in a small space
• Optional Cable Tie-Bars	• Cable strain relief

Applications

- Broadcast Studios
- Rack Integration
- Mobile Trucks
- Computer Stations
