Zaolla

Product

AES/EBU DB25-XLR Audio Snakes

Product Brief Description

Zaolla Silverline cables feature solid-silver conductors for digital and analog audio interconnects. This series of solid silver core snake cables offer significant sonic benefits. Signals are transmitted over a length of cable as electrical current. Current flows through the cable's conductor when electrons are released from the incomplete outer shell of one atom to that of another. Silver (Ag), with an atomic weight of 47, is a larger atom with more electrons in its incomplete outer shell than copper (Cu), with its atomic weight of 27. Hence, silver releases more electrons more freely than copper, making it the superior conductor. The benefit is a better more pure transmission of the audio signal.

Features

Benefits

- | | |
|--|-----------------------------------|
| • Solid Silver Core | • Ideal signal transmission |
| • High quality durable connectors | • Best possible termination |
| • 7% Less Resistant than Copper Cables | • Improved HF & LF Signal Clarity |

Applications

- Recording Studios
- Mobile Recording

Comparison Matrix

Features/Spec's	Zaolla Silverline	Monster Studio Link 500
Price	\$\$\$	\$\$\$
Hybrid Silver with Copper shield	Yes	No
Redundant Shielding	Yes	No
